

Always-on
challenger

UMAP-2

Recovery

Harm

Notes

Contrast figure (new):

problem $\blacksquare$ → answer $\circ$

Old figure (unchanged):
baseline sol → target sol

Each row fits its own UMAP
on that row's Recovery/Harm
problem+answer endpoints.

HF1 answer:

KEEP = baseline sol

REPLACE = challenger

Violin: $\|e_{\text{ans}} - e_{\text{prob}}\|_2$
in BGE space (not UMAP).

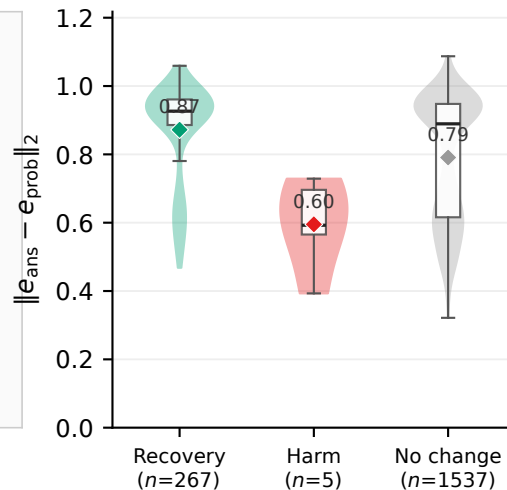

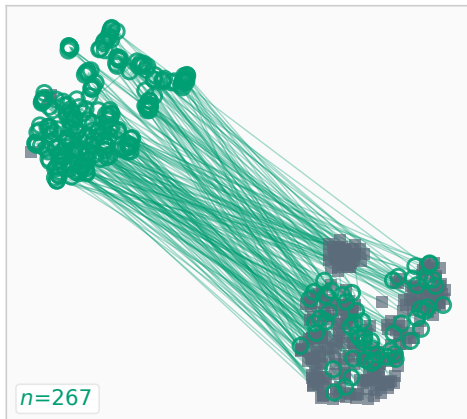

Counts (rec / harm / nc)

Challenger 341 / 293 / 1175

HF1 267 / 5 / 1537
